& FOOD SCIENCES**

X

Beirut Farm has been consulting AUB's Agricultural Department on hydroponic projects; leafy greens, strawberries, peppers, and tomatoes, grown in a fully controlled vertical farm.

Our collaboration is redefining food production in a changing climate: smart, sustainable, and scalable.

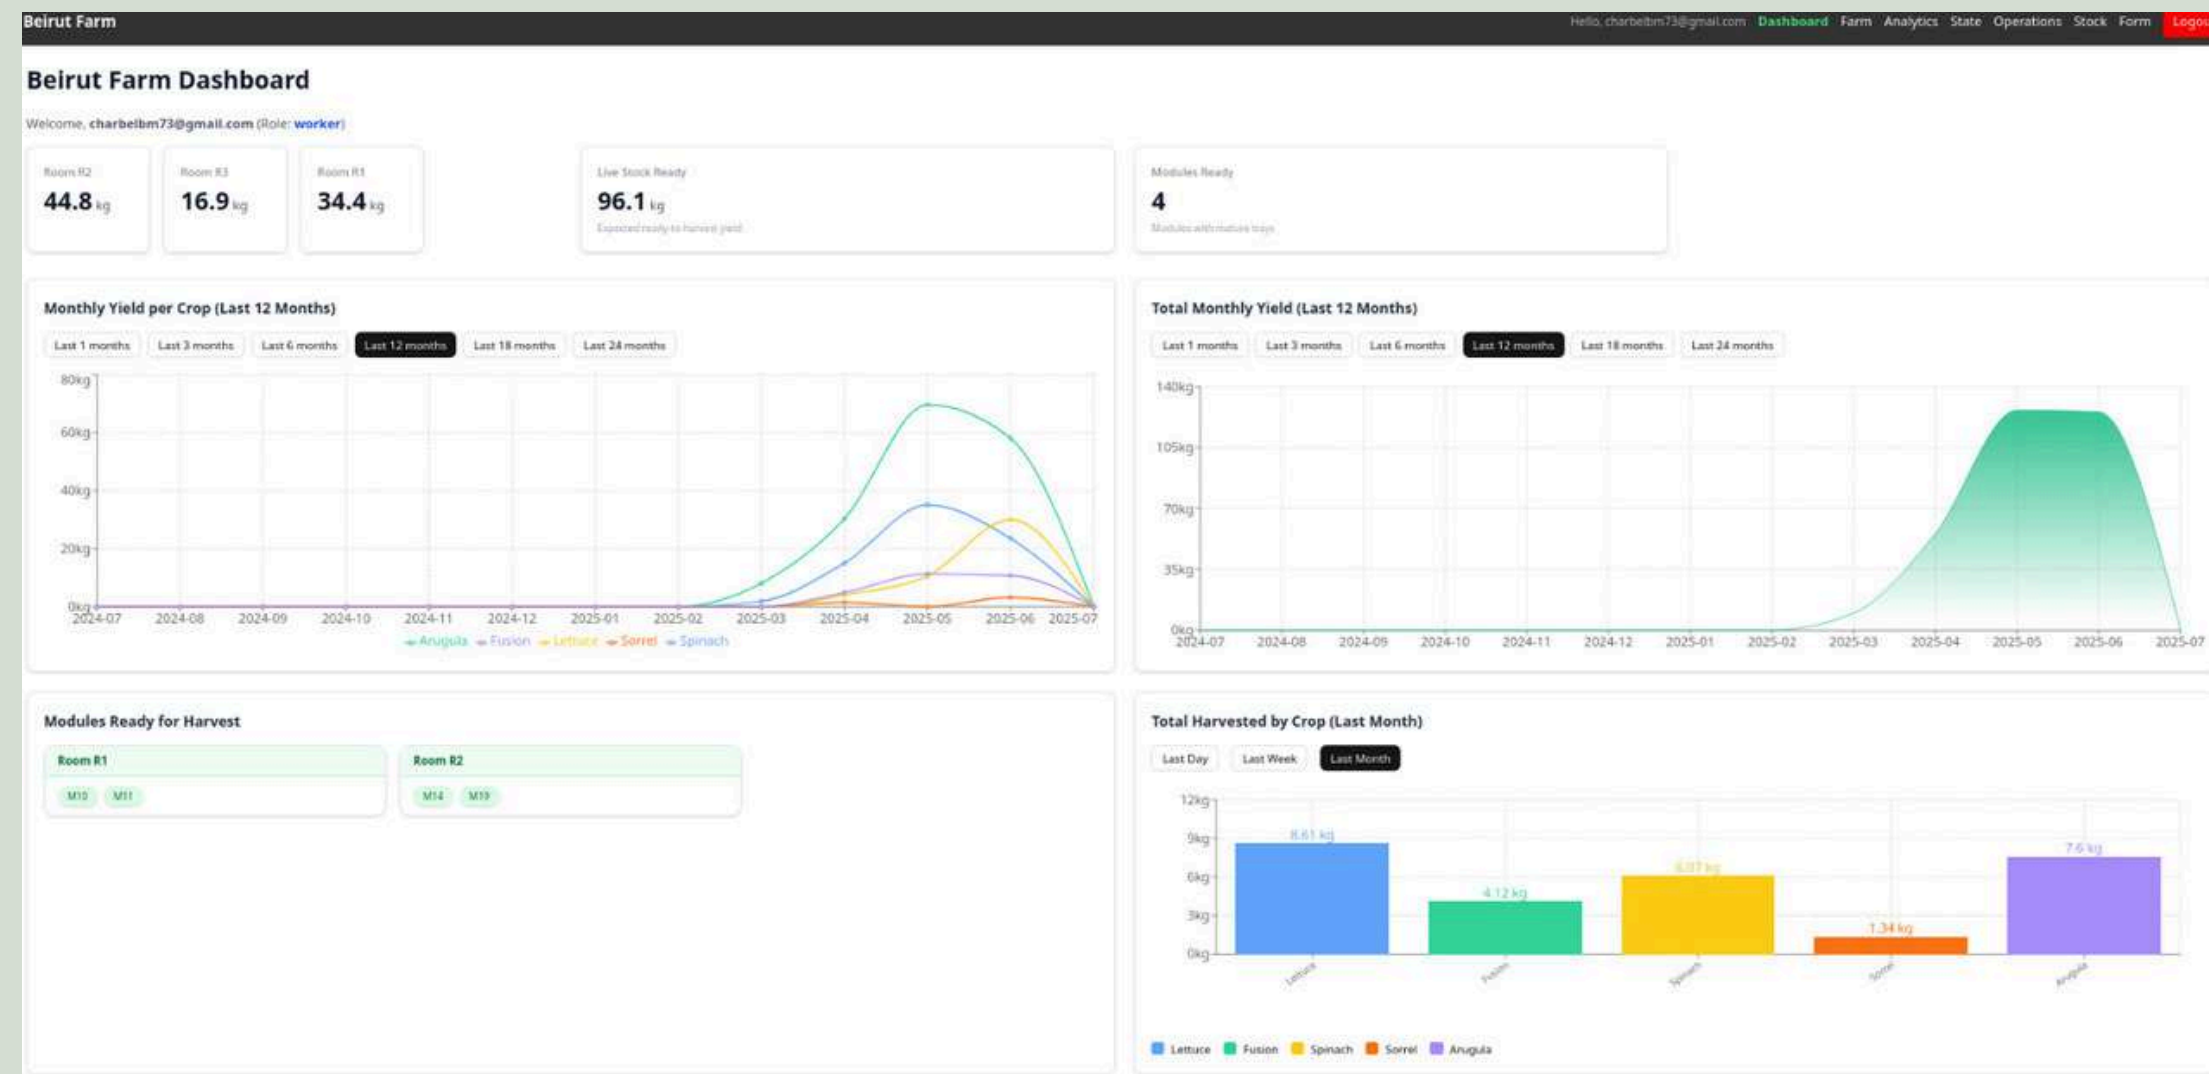

Beirut Farm has an ongoing internship program for AUB students.

Data Collection

At Beirut Farm, we've built a smart data system tracking daily reports, yield, and transplants across our 40,000-plant vertical farm.

Over two years, this data has helped us optimize operations and build a knowledge base to support the future of agriculture and guide other hydroponic projects.

Salad project

Beirut Farm is launching a refined, ready-made salad line, using hydroponically grown greens that are beyond organic – zero pesticides, zero herbicides, and 100% freshness.

Farm to Fork Concept

1. Freshly harvested in the morning
2. Assembled with care
3. Delivered to you the same day
